

∞ Parents in Prayer ∞

During this Month of the Rosary, here is
a reminder that our daily rosary benefits not only
ourselves, but our family, friends, and even our world!

*Fr. Albert Shamon tells a unique story of the rosary,
revolving around Dr. Carlos Finlay, the Cuban physician who
discovered that yellow fever and malaria
were carried by the mosquito.*

*Returning home one night, exhausted after a long day's work, he
remembered that he had not yet said his rosary, which was a daily
devotion for him. So he began to pray, sleepy though he was, but he
was distracted by a buzzing mosquito flying
persistently around his head.*

*At that moment, as if inspired by the Virgin, the idea occurred to him
that it may be the mosquito which transmits yellow fever and malaria.
He began to experiment with this theory and proved
that it was indeed correct, ending a century of research
into the cause of those dreaded diseases.*

*Next time you spot a mosquito, remember Dr. Finlay's story,
pray your rosary and see what happens...*

Parents in Prayer meets every week during the school year.

Why not try it out?

Wednesdays 8:00am Mass or
8:30am Rosary in Church Social Room
